Mihir Srivastava

Python · DevOps · Data Pipelines & Solution Design

+91 73181 91290 | mihir.srivastava001@gmail.com | Linkedin | GitHub | LeetCode

Education

Lovely Professional University | *B.Tech – Computer Science* **Passing Year: 2025**

Sant Atulanand Convent School | *Higher Secondary Education* **Passing Year: 2020**

Professional Experience

Software Engineer / DevOps | *Capgemini Engineering (Client – Volvo)* **Aug 2025 – Present**

- Design and maintain production-grade SAP Data Intelligence data pipelines end-to-end – building, running, and owning the code across enterprise client environments, ensuring high availability and stable data delivery.
- Build Python automation for data transformation and orchestration within a DevOps setup, working directly with engineers and business stakeholders to translate requirements into reliable, reusable solutions.
- Troubleshoot execution failures and provide support to stakeholders, implementing monitoring and alerting on pipeline health to enable fast incident recovery and consistent data freshness.
- **Technologies:** Python, SAP Data Intelligence, Data Pipelines, Linux, Monitoring & Alerting, Stakeholder Support

DevOps Engineer Intern | *Capgemini* **Jan 2025 – July 2025**

- Containerised and deployed microservices using Docker and Kubernetes (Deployments, Services, ConfigMaps, Secrets), applying secure-by-design practices to secrets and configuration handling.
- Built end-to-end CI/CD pipelines with Jenkins and GitHub Actions, and provisioned AWS infrastructure via Terraform for fully automated, repeatable deployments.
- Automated Linux operational tasks with shell scripting and version-controlled infrastructure-as-code through GitHub for auditable, collaborative workflows across the SDLC.
- **Technologies:** Docker, Kubernetes, Jenkins, Terraform, AWS, GitHub Actions, Linux, Shell Scripting

Personal Projects

CloudCostBot – Cloud Cost Intelligence Dashboard | code | live **2026**

- Proposed and built a serverless AWS cost monitoring solution using Cost Explorer APIs and Pandas-based anomaly detection to surface spending spikes and cost optimisation opportunities – directly relevant to cost-effective solution delivery.
- Developed Plotly/Streamlit dashboards for real-time visibility and deployed serverless components (AWS Lambda + EventBridge) for automated Slack digest alerts, gathering iterative feedback to refine the design.
- Provisioned all infrastructure via Terraform with a GitHub Actions CI/CD pipeline, built with reusability and cost efficiency in mind.
- **Tech Stack:** Python, AWS Serverless (Lambda, EventBridge, Cost Explorer), Pandas, Plotly, Streamlit, Terraform, GitHub Actions

Customer Churn Prediction Model | code **2024**

- Built Logistic Regression and Random Forest models on 10,000+ customer records to identify churn patterns and support data-driven retention decisions.
- Performed EDA, feature engineering, and model evaluation with Scikit-learn and Pandas; visualised results for stakeholder communication.
- **Tech Stack:** Python, Scikit-learn, Pandas, Matplotlib

Flutter Birdie Game | code **2024**

- Developed a physics-based 2D game in Unity with obstacle generation, collision detection, and score tracking systems.
- Applied optimisation techniques to maintain stable frame rates and smooth player interaction.
- **Tech Stack:** Unity, C#, Game Physics

Technical Skills

Languages: Python, Shell Scripting, SQL
Cloud, DevOps & Serverless: AWS (incl. Lambda, EventBridge), Docker, Kubernetes, Jenkins, GitHub CI/CD, Terraform
Data & Pipelines: Data Pipelines, Pandas, NumPy, SAP Data Intelligence, ETL/Automation
Systems: Linux, Shell Scripting, Basic Networking, Secrets Management (K8s)
AI Tools: Claude Code, Amazon Q, GitHub Copilot, Cursor
Developer Tools: Git, GitHub, REST API, Design Patterns, SDLC

Certifications

AWS Certified Cloud Practitioner (CLF-C02) | *Amazon Web Services* **Sep 2025**

Azure AI Fundamentals (AI-900) | *Microsoft* **Nov 2025**

Python for Data Science & AI | *IBM* **Apr 2024**
