Mihir Srivastava

Python Backend · Cloud-Native Systems · AI-Assisted Engineering

+91 73181 91290 | mihir.srivastava001@gmail.com | Linkedin | GitHub | LeetCode

Summary

Python backend engineer with hands-on experience building REST API-driven data services and orchestration pipelines on SAP Data Intelligence, and event-driven, cloud-native services on AWS (Lambda, EventBridge) deployed with Docker, Kubernetes, Terraform, and CI/CD. Anthropic-certified (Claude Certified Architect – Professional) with daily experience using LLM-based tooling in engineering workflows. Strong focus on reliability, observability, and automation.

Education

Lovely Professional University | *B.Tech – Computer Science* **Passing Year: 2025**

Sant Atulanand Convent School | *Higher Secondary Education* **Passing Year: 2020**

Professional Experience

Software Engineer / DevOps | *Capgemini Engineering (Client – Volvo)* **Aug 2025 – Present**

- Build and maintain production Python backend data services and REST API-driven orchestration pipelines on SAP Data Intelligence, keeping them highly available and delivering reliably for enterprise, cloud-native client environments, while cutting down on manual operational work.
- Track down why pipeline executions fail, tune workflow performance, and set up monitoring & alerting so issues are caught early, recovery is fast, and data stays fresh.
- **Technologies:** Python, REST APIs, SAP Data Intelligence, Linux

DevOps Engineer Intern | *Capgemini Engineering* **Jan 2025 – July 2025**

- Containerised and deployed backend microservices with Docker and Kubernetes (Deployments, Services, ConfigMaps, Secrets), and built end-to-end CI/CD pipelines with Jenkins plus AWS infrastructure via Terraform, so deployments were consistent, repeatable, and fully automated.
- Automated routine Linux operations with shell scripting and kept infrastructure as version-controlled IaC on GitHub, working through pull requests and Agile workflows with the team.
- **Technologies:** Docker, Kubernetes, Jenkins, Terraform, AWS, GitHub Actions, Linux, Shell Scripting

Personal Projects

CloudCostBot – Cloud Cost Intelligence Dashboard | code | live **2026**

- Built a Python backend service that pulls data from the AWS Cost Explorer APIs and uses Pandas-based anomaly detection to flag spending spikes and find ways to cut costs.
- Deployed an event-driven AWS Lambda + EventBridge microservice that sends automated Slack digest alerts, and built Plotly/Streamlit dashboards for real-time cost visibility.
- Set up all the cloud infrastructure with Terraform and a GitHub Actions CI/CD pipeline, running entirely within the AWS free tier.
- **Tech Stack:** Python, AWS (Cost Explorer, Lambda, EventBridge), REST APIs, Pandas, Plotly, Streamlit, Terraform, GitHub Actions

Customer Churn Prediction Model | code **2024**

- Trained Logistic Regression and Random Forest models on 10,000+ customer records to spot churn patterns and support better retention decisions.
- Handled EDA, feature engineering, and model evaluation with Scikit-learn and Pandas, and visualised the results so stakeholders could follow them easily.
- **Tech Stack:** Python, Scikit-learn, Pandas, Matplotlib

Technical Skills

Languages: Python, SQL, Shell Scripting
Backend & APIs: REST APIs, Microservices, Event-Driven Services, Data Pipelines, Data Structures & Algorithms
Data: Pandas, SQL, Scikit-learn
AI & LLM Tooling: Claude Code, GitHub Copilot, Amazon Q, Cursor
Cloud & DevOps: AWS, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, Git, Linux
Observability: Alerting, Incident Diagnosis, Performance Tuning

Certifications

Claude Certified Architect - Professional | *Anthropic* **Apr 2026**

AWS Certified Cloud Practitioner (CLF-C02) | *Amazon Web Services* **Sep 2025**

Azure AI Fundamentals (AI-900) | *Microsoft* **Nov 2025**
